                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NCI_CGAP_GC4 was prepared, and so circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1257096-1258631, 1469064-1470983, and 1475592-1476743). Subtraction by Bento Soares and M. Fatima Bonaldo. "

                                                            Claim 6; Fig 1; 58pp; English.

This sequence encodes human eph/elk-like kinase (HEK). HEK is expressed in both pre-B cells and T cell lines and in a number of tumours of human origin, eg. lymphoid tumours LKG3, Lila-1 and JM, and the epithelial tumour HeLa. This receptor-type thymidine kinase (TK) and/or its ligands are useful as agents in modulation of the production and/or function of pre-B, B and T cells. The TK and its analogues have activity in transducing signals or in stimulating cellular responses such as growth and/or differentiation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Page 85-89; 129pp; English.

Probes derived from the EPH-related PTKs Cek4 (Q90659) and Ce (Q90660) were used to isolate novel CDNA clones (Q90652-58, Q90661-62) from chicken embryo and embryonic brain libraries. Cek4 is highly expressed in the chicken developing brain and embryonic tissues, as well as in the adult brain and retina. Sequence 3254 BP; 926 A; 737 C; 796 G; 795 T;

Claim 5; Fig 22; 194pp; English.
Claim 5; Fig 22; 194pp; English.
The present invention describes nucleic acid molecules ror ....
The present invention described are the corresponding prot ror 2, ehk-1 and ehk-2. Also described are the corresponding prot Ror-1; Ror-2; Ehk-1; and Ehk-2. The proteins are orphan receptor tyrosine kinases. The present sequence encodes rat Ehk-1.

AL-1 neurotrophic factor, an eph-tyrosine kinase ligand - used in retreatment and diagnosis of neuronal disorders and reatment reatment respectively. As per fragment was used as a probe to isolate the full-length REK7 cDNA from a rat hippocampal cDNA library. A per fragment was used as a probe to isolate the full-length REK7 cDNA from a rat hippocampal cDNA library. An of REK-IgG fusion was used to screen cultured cell lines for surface expression of REK7-binding activity. Primers based on isolated cligands were used to amplify human breast carcinoma BT20 cell cligands were used to amplify human breast carcinoma BT20 cell conna, and an amplified fragment was used to screen a human foetal brain cDNA library, leading to the isolation of AL-1 cDNA (T18897). So Sequence 4165 BP; 1157 A; 907 C; 1035 G; 1066 T;
